

Aquasana Rhino EQ-300 Whole House Water Filter System

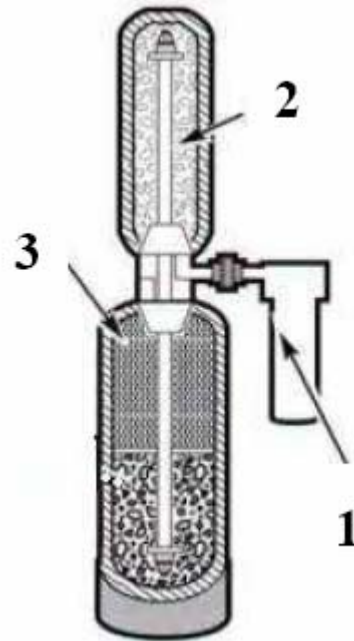

Water Treatment Method: Charcoal - With Chlorine Reduction - With Particle Removal

Aquasana Rhino EQ-300 water filter is [UL-certified](#)!

This deluxe, high capacity system has the highest "certified" capacity of any Whole House Water Filtration System in America! 4 stage filtration process supplies better than bottled water quality throughout the entire household for only pennies a day.

Here's how it works -

- **Stage 1** is a 5-micron sediment prefilter that uses replaceable cartridges to remove any particles larger than 5 micron. By removing sediment from water, this filter will also significantly prolong the life of the main filter unit.
- **Stage 2** uses a patentent zinc/copper mineral media (KDF) that filters out chlorine
- **Stage 3** enhances taste and clarity with bituminous activated carbon (charcoal), which is one of the most widely used and recognized technologies for water filtration
- **Stage 4** uses high-grade coconut shell carbon, that provides very large contaminant absorbtion capacity
